Experience

Oracle Financial Services Software | Application Software Engineer **August 2025 - Present**

- Delivered production support and feature enhancements for OBPM across ACH/NACHA origination, transaction lifecycles, accounting flows, queue management, and file-upload validation.
- Resolved 100+ customer-reported defects through root-cause analysis, log tracing, data verification, and targeted code fixes.
- Strengthened exception-repair workflows, future/value-date handling, file processing, and payment-rule validation by correcting logic and improving queue routing.
- Integrated AI-assisted capabilities into an existing business workflow while maintaining compatibility with payment-processing rules, validation requirements, and operational support processes.
- *Tech Stack: Java, JavaScript, Oracle SQL/PLSQL, Gradle, Git, SVN, XML, ACH/NACHA file formats, application logs, Excel, and PDF/RAD artifacts.*

Seminarroom | Developer Intern **February 2025 - June 2025**

- Supported end-to-end product delivery across frontend and backend development, wireframing, CI/CD, and seamless feature integration within a collaborative corporate environment.

Siemens Technology and Services | Summer Intern **January 2024 - January 2025**

- Contributed to frontend and UI/UX development for an in-company logistics website using Angular, FigJam, and Jira.

Projects

AI Payments Operations Copilot | Java, FastAPI, RAG

- Built a secure internal copilot that answers payment-operations runbook questions with cited RAG responses and provides controlled analytics over synthetic payment, exception, cut-off, and reconciliation data.
- Implemented JWT/RBAC, PII masking, prompt-injection guardrails, approved parameterized read-only SQL templates, audit trails, and a 64-case evaluation suite for retrieval, analytics, and safety regression testing. *Tech Stack: Java, Spring Boot, Python, FastAPI, PostgreSQL, RAG.*

MUN - Multi-University Notes | MERN Stack | GitHub

- Collaborated on a student-focused lecture-note platform, contributing to its design, development, and user-friendly implementation.

MealConnect | Flutter, Dart, Firebase, MongoDB | GitHub

- Built a mobile application that connects food donors with authenticated NGOs, supports pickup scheduling, and helps users track their contributions.

Bone Fracture Detection | Machine Learning, Deep Learning

- Developed a binary fracture-detection solution for X-ray images, CT scans, and MRIs using a ResNet-50 convolutional model with sigmoid activation.

Technical Skills

Languages: Python, Java, C, SQL, JavaScript
Web & Backend: HTML, CSS, NodeJS, AngularJS, Spring Boot, Microservices
Databases: OracleDB, MongoDB, Firebase, PostgreSQL
DevOps: Docker, GitHub Workflows, Kubernetes, Jenkins, AWS EC2
Tools & Domain: Git, SVN, Gradle, XML, ACH/NACHA, Power BI, Hadoop, Scala, Web Scraping, Snowflake

Courses & Certifications

- 100 Days of Python Programming - completed 40 days of intensive project work.
- Google Cybersecurity Professional Course - 8-course Coursera series.
- Introduction to Generative AI for Software Development - Coursera.
- Gen AI with Snowflake - LinkedIn Learning.
- Oracle Certified Professional: Java SE 25 Developer.

Education

BMS College of Engineering, Bangalore, India **2021 – 2025**
Computer Science and Engineering *CGPA: 9.30*

Vidhyaniketan PU Science College | PCMS **99.4%**
St. Antonys Public School | CBSC **95%**
